1. Overview

FontFilter provides a palette for easier handling of fonts within QuarkXPress™. It only displays the fonts used in the current document together with a subset of the system fonts. This subset can be defined by the user.

2. System requirements

- QuarkXPress™ 2015/16/17, macOS

3. Installation

3.1 QuarkXPress™ 2015/16

To install copy the file “JoLetter.xnt” into the XTensions folder of QuarkXPress™. After a restart of QuarkXPress™ JoLetter is ready to use.

3.2 QuarkXPress™ 2017

For QuarkXPress™ 2017, macOS, there are two possible locations for installing XTensions software (current user/all users). Please use only one of them!

- ~/Library/Application Support/Quark/QuarkXPress 2017/XTensions
- /Library/Application Support/Quark/QuarkXPress 2017/XTensions

In case the according folder do not exist, you have to create them!

4. The FontFilter palette

The FontFilter palette can be shown or hidden by choosing „Window->FontFilter“.

Die FontFilter Palette (Quark 8/9)

The FontFilter palette (Quark 10)

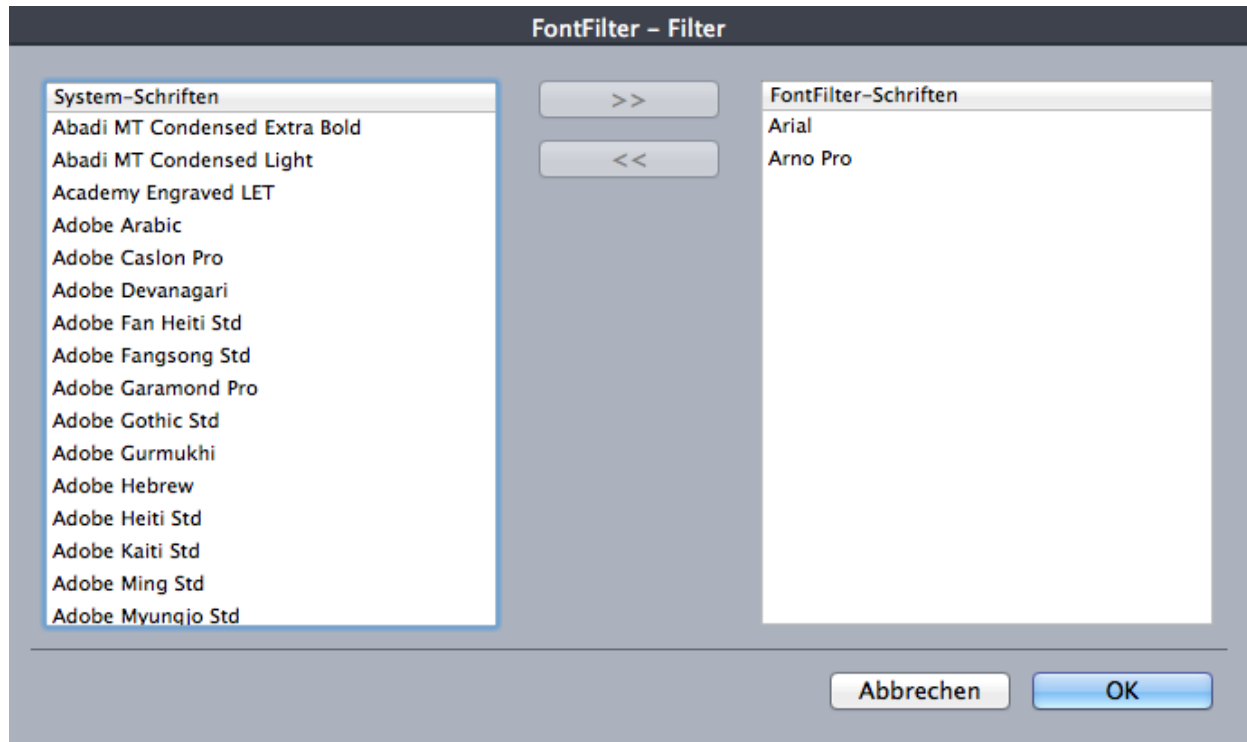

The text field shows the current active font, if any. By clicking on the popup triangle at the right a menu pops up with a list of fonts for changing the current font. The list consists of all fonts found in the document together with a subset of the system fonts.

This subset can be defined by clicking in the standard palette menu item (for Quark 8/9 control click into the window title).

Edit font list...

The following dialog pops up:

Definining a font subset...

By double clicking the fonts you can move them from left to right or vice versa.
